

# CASE STUDY

## MORE WASTED RATCHETS!

During two recent site visits to the resource sectors of Australia, the X-Pak demo staff noticed more ratchet strap wastage & offered the new X-Pak lashing system as a solution. Clients are much happier being able to secure loads with a cost effective, certified system!

### ON PALLETS

- Wasted ratchet straps everywhere!!!
- One particular client was using a 9m long ratchet strap to secure goods on pallets – around 2 m of strapping was required.
- A full supply base & laydown area with pallets using ratchet straps. This client was using over 200 ratchet straps per month.
- Ratchets were being used as they are certified with a tag. The X-Pak lashing has the rating printed on it & X-Pak are able to provide documentation to comply with international shipping standards!

### ON FLAT RACK

- Site pack using ratchet straps could have used either the XL2300 or XL5000 systems – saving the client on their lashing costs
- Flat racks need to be marine surveyor approved. The X-Pak lashing has printed ratings & is Germanischer Lloyd approved – International Shipping Standards
- Many site packs are carried out in the Australian market & the X-Pak lashing is a new & exciting, certified system...Australia's first cost effective ratchet strap replacement!
